

INSTRUCTIONS

SAGGING RECLINER SUPPORT

Turn the recliner over and inspect. Check that you have zig-zag springs. This will not work with a broken seat spring. Will not work with strap webbing or coil spring construction .
**big man's chair*

Install by turning the recliner up-side down with the foot rest extended and feeding the sags away above the seat springs to compress foam density in the cushion above.

You can install in difference thickness configurations. Stack 1, 2 or 3 pieces thick until you get the amount of support you need. There is no need to cover or support the entire seat area.

Repair kit contains three 6" x 18" x .5" pieces. Made in the USA. Try one first to test your results. Instructions and a phone number for support are included.

Warning: Failure to extend the footrest could lead to losing a finger.

Works on most motion furniture: Recliners, Reclining Couch or Reclining Loveseat to repair your sagging seat. It entails turning your reclining furniture up-side down and feeding a specialized material under the seat springs. It's not complicated or that difficult to do - but you may break a sweat feeding it through. A tremendous value if you can Extend the Life of your Furniture.

We recommend that you order one sagging recliner support seat cushion repair kit for each recliner seat and test your results first. Our kit offers a tremendous value if you can delay buying new furniture.
